#### CELL & GENE THERAPY INSIGHTS EDITORIAL CALENDAR

	JANUARY	FEBRUARY	MARCH	APRIL	MAY	JUNE
Journal Spotlights		Preclinical and translational tools and strategies	Raw and starting materials	Vector bioprocessing	Gene delivery/gene editing platform evolution	Industrializing immuno- oncology product manufacture and supply chain
<b>Channel Editions</b> Published quarterly: -Vector - Supply Chain - Analytics		VECTOR: Enhancing vector bioprocess scalability	ANALYTICS: Enhancing accuracy and throughput	SUPPLY CHAIN: Best practices for ensuring cell and gene therapy supply chain scalability	VECTOR: Vector characterization	ANALYTICS: Meeting raw and starting material testing requirements
Channel Newsletters		Manufacturing Vector	Manufacturing Vector Analytics	Manufacturing Vector Supply chain	Manufacturing Vector	Manufacturing Vector Analytics
Reports		\$ Business Insights	Clinical Trends          Innovation Insights	Regulatory Insights	\$ Business Insights	Clinical Trends          Innovation Insights
Podcast series			Tomorrow's cell and gene therapy workforce			Licensing and partnering in cell and gene therapy
	JULY	AUGUST	SEPTEMBER	OCTOBER	NOVEMBER	DECEMBER
Journal Biogrammer Biogrammer Spotlights	Global regulatory update	New horizons in cellular immunotherapy	Cell and gene therapy manufacturing scale-up/ scale-out	Gene therapy CMC and analytics	Cell therapy bioprocessing	Tools of tomorrow
<b>Channel Editions</b> Published quarterly: -Vector - Supply Chain - Analytics	SUPPLY CHAIN: Driving the digitization of cell and gene therapy supply chains	VECTOR: Upstream Bioprocessing	ANALYTICS: Harnessing in-process analytics SUPPLY CHAIN: Optimizing raw	VECTOR: Downstream bioprocessing	SUPPLY CHAIN: Starting materials sourcing and management	ANALYTICS: Accelerating routine QC testing
Channel Newsletters	Manufacturing Vector Supply chain	Manufacturing Vector	materials quality Manufacturing Vector Analytics	Manufacturing Vector Supply chain	Manufacturing Vector	Manufacturing Vector Supply chain Analytics
Reports	\$ Business Insights	Innovation Insights	Clinical Trends	C Innovation Insights	\$         Business Insights           Clinical Trends         Clinical Trends	Regulatory Insights
Podcast series			Digitally enabling cell and gene therapy			The potential of mRNA for advanced therapies

Contact Nicola McCall on +44 1732 463215 or n.mccall@insights.bio to discuss thought leadership and lead generation opportunities

# EDITORIAL CALENDAR Spotlights summary

Contact Nicola McCall on +44 1732 463215 or n.mccall@insights.bio to discuss thought leadership and lead generation opportunities

### **CELL & GENE THERAPY** INSIGHTS EDITORIAL CALENDAR

#### Spotlights details

Cell & Gene Therapy Insights' Spotlights provide you with fantastic opportunities to:

Educate your target market about your company's expertise, capabilities and experience Share your latest data with organisations looking for partners and service providers in your field Profile your executives and scientists as thought-leaders and KOLs Generate qualified leads from across the global sector Increase awareness of your company's role in cell and gene therapy R&D and manufacture.

#### Each spotlight will comprise:

Peer-reviewed Reviews and Expert Insight articles written by leading experts in the field Webinars, featuring industry speakers and sponsors discussing key topics specific to the Spotlight Podcast, written and video interviews with key opinion leaders On demand roundtable discussions

FEB

Preclinical and translational tools and strategies

MAR

Raw & starting materials

 Joined-up assays: defining best practices for an integrated approach to early-stage potency assay R&D, keeping the eventual goal of marketing application in mind

 Use of organoids, tissues on-a-chip, and other emerging in vitro and in silico tools to support preclinical data packages and provide genuinely predictive clinical insights

- Standardization in the manufacture and usage of *in vitro* models
- Biomarkers and surrogate marker development: regulatory acceptance criteria and implications for first-in-human trial designs
- Computational biology and big data analytics tools for cell/gene therapy target identification/validation and non-clinical development
- ▶ PK/PD modeling applied in the cell/gene therapy field
- Testing for immunotoxicity or genotoxicity: safety testing where *in vivo* models are unavailable
- Addressing the lack of good non-clinical models for allogeneic cell therapy development
- To what extent can we address long-term clinical efficacy through redosing of *in vivo* gene therapy products in preclinical models?

- Regulatory agency expectations for raw and starting materials
- Qualification of raw materials
- Regulatory disharmony between different national and multinational jurisdictions
- Evolving risk management considerations and best practices
- Long-term upstream supply chain strategies: anticipating and preparing for raw material and consumables shortages and challenges in obtaining starting materials related to COVID-19
- Increasing consistency, scalability, and standardization and reducing costs of raw materials
- Analytical tool development to support material changes
- Production of materials in-house vs outsourcing
- Steps to removing a complex biological material from your process and replacing it
- Control of starting materials for autologous and allogeneic cell therapies
- Cell line development upstream of allogeneic cell banking
- Cell sorting and selection for optimized manufacture

- Analysis of the rapidly evolving competitive landscape in vector manufacturing
- Viral vector capacity issues (AAV and LV)
- Future supply and demand trends in light of the current pandemic
- Viral vector process intensification and streamlining production through automation and reduction in process steps
- Production platforms

**APR** 

- Pros and cons of producer cell lines
- Technological trends and advancements in vector purification
- > Shortfalls in the established bioanalytical toolkit
- Viral clearance in viral vector processing
- Reducing timeframes for process development activities and earlier process-related decision-making
- How to protect your GMP vector production from COVID-19?
- What does phase-appropriate GMP look like in practice?

Industrializing immuno-oncology product manufacture and supply chain

- Gene editing platform/application evolution
- How and where are next-generation gene editing platforms being applied and with what benefit?
- Predicting future trends in gene editing platform evolution
- Engineering/innovating around long-standing issues for AAV vectors as the field expands into larger patient populations
  - Pre-existing immunity
- Redosing
- Enhancing specificity/tissue tropism: systemic delivery
- Improving AAV vector efficiency/potency to enable dose reduction and an improved toxicity profile?
- > Third-generation LV vectors in ex vivo and in vivo settings
- Have safety issues now been sufficiently addressed?
- Non-viral delivery platforms: benefits, obstacles, and their potential future impact on the cell and gene therapy space
- mRNA delivery in the light of the approved COVID-19 vaccines
- Lipid nanoparticles
- Exosomes
- Electroporation

- Lessons learned during the second wave of approved CAR T cell therapies from the roll of out Kymriah and Yescarta.
- Improving cost effectiveness, with market and patient access in mind
- Difference between clinical and commercial CAR T cell therapy manufacturing
- What is the best approach to ensure such novel and personalized medicines find their patients – and the physicians who prescribe them?
- Delivering cellular immunotherapy to larger patient groups
- Capacity and infrastructure requirements to enable widespread patient access
- Supply chain improvements required by emerging cellular immunotherapy modalities (eg. TILs)
- What will the cellular immunotherapy products we are manufacturing in 3–5 years' time look like – and what does this means for today's facility design?

- National and global updates on novel and forthcoming guidance
- ▶ Learnings from regulator knock-backs of BLAs/MAAs
- Regulator perspectives on the evolving cell therapy and gene therapy CMC landscapes
- Impact of the EMA's 'principles of GMP for manufacturing of starting materials of biological origin used to transfer genetic materials for the manufacture of ATMPs'
- Managing different regulations in countries receiving centrally manufactured modified cell products and gene therapies
- Expedited development pathways (eg. EU PRIME)
- Regulations regarding combination products
- Environmental Risk Assessment (ERA) for medicinal products containing/consisting of genetically modified organisms
- Regulating unproven stem cell treatment/medical tourism
- Disconnects between science and ethics

New horizons in cellular immunotherapy	Cell and gene therapy SEP manufacturing scale-up/scale-out	<b>OCT</b> Gene therapy CMC and analytics
<ul> <li>Impact on CoGs, product quality, and manufacturing cycle time and complexity of the range of cell engineering platform options</li> <li>Emerging technologies to improve targeting of the tumor microenvironment and reduce toxicity issues</li> <li>Multiomics, single cell sequencing/analysis, non-invasive spatial imaging, novel in vitro cell/tissue models, computational biology and big data analysis, machine learning and Al</li> <li>Next generation cellular immunotherapy modalities</li> <li>T cell immunotherapies: what improvements are being made in enhancing safety, efficacy, and durability?</li> <li>Optimization approaches for allogeneic cell therapies</li> <li>Non-T-cell CARs (eg. NK-CARs, CAR macrophages)</li> <li>Optimization of tumor infiltrating lymphocyte autologous therapies</li> <li>Innovation in alternative cell therapy molecular design and multiplex cell engineering</li> <li>How to approach antigen discovery in the solid tumor setting?</li> <li>Current trends and future directions in combination therapy selection</li> <li>How far away is <i>in vivo</i> gene immunotherapy?</li> </ul>	<ul> <li>Increasing availability of 'right-sized', built-for-purpose cell and gene therapy bioprocessing technology on scale-up/-out approaches</li> <li>Viral vector scale-up/scale-out: progress in scaling manufacturing platforms and boosting yields to enable the ongoing migration to larger indications</li> <li>Facilities designed for &lt;2,000 L production capacities: challenges at large production scales <ul> <li>Safeguarding against over- and under-sizing vector manufacturing facilities</li> <li>Scale-up of adherent bioreactors</li> <li>Improving scalability of transient transfection processes</li> </ul> </li> <li>Exploring scalability-related pros and cons of emerging non-viral gene delivery platforms</li> <li>Allogeneic cell therapy scale-up</li> <li>Autologous cell therapy scale-out: centralized vs decentralized</li> <li>Addressing the shortage in adequately trained/experienced personnel</li> </ul>	<ul> <li>Improving the speed and cost-effectiveness of vector bioprocessing and the identification and measurement of quality attributes using cutting edge analytical tools</li> <li>PAT to accelerate bioprocess monitoring/testing</li> <li>Throughput-related issues</li> <li>Empty/full capsid ratio: assessing current tools and methodologies</li> <li>Next-generation sequencing in gene therapy product development and manufacture</li> <li>Measuring the impact of AAV vector engineering methods on the capsid and its transduction profile</li> <li>Standards and assay options for viral clearance and adventitious agent control in gene therapy manufacture</li> <li>Reducing the amount of final vector product required for QC and release testing</li> <li>In-process analytics and controls in the gene therapy field</li> <li>CMC data required for an ultra-rare disease indication</li> <li>'Plug-and-play' gene therapy platforms for ultra-rare indications</li> <li>How is regulatory evolution reshaping the gene therapy CMC space?</li> <li>Changes in CMC guidance</li> <li>Potency assays</li> </ul>

Cell therapy bioprocessing	DEC Tools of tomorrow
<ul> <li>Cost of goods reduction and streamlining/simplifying manufacture <ul> <li>Allogeneic cell therapy</li> <li>Reducing manufacturing process cycle times</li> <li>Managing the number and complexity of gene edits</li> <li>Industrializing manufacture of extracellular vesicle/exosome-based therapies</li> </ul> </li> <li>Automation and fully closed systems for cell therapy manufacturing <ul> <li>CoGs analysis for closed/automated cell therapy bioprocessing tools</li> <li>Modular options to automate individual steps of the process</li> </ul> </li> <li>Cell differentiation approaches for cell therapy</li> <li>Pros and cons of novel fill-finish platforms</li> <li>Ensuring reduced timeframes for process development activities alongside earlier process-related decision-making</li> <li>What does phase-appropriate GMP look like in practice?</li> <li>Protecting GMP cell therapy manufacturing from COVID-19</li> <li>What will GMP manufacturing in the 'new normal' look like?</li> </ul>	<ul> <li>Cell &amp; Gene Therapy Insights' annual exploration of enabling tools and therapeutic technology platforms likely to make a splash in 2023.</li> </ul>
